

Project 2 - Timer Sleep

PintOS

So far, we have discussed how to build simple tests in PintOS and how to work with the list data structure included in the basic C Library present in PintOS. In this second (**graded**) project, your task is to re-implement the threads **“sleep”** functionality.

The thread's sleep function

The current thread sleep functionality is implemented in the **“timer_sleep()”** function located in the **“devices/timer.c”** file in PintOS. **This function is executed when user processes call the sleep system-call**. The current implementation is like so:

```
void
timer_sleep (int64_t ticks)
{
    int64_t start = timer_ticks ();
    while (timer_elapsed (start) < ticks)
        thread_yield ();
}
```

As you may notice, the **problem** here is that **this implementation uses a BUSY WAIT approach and your task is to mitigate that.**

Re-implement this function to:

- Avoid busy waiting
- Not brake tests that already pass!
 - to see the tests that are being executed and already passing run `make check` in the threads directory before starting your implementation
- Ideally, be efficient

Hints

- Use **“thread_block()”** and keep track of sleeping threads (using a list, for example)
 - **“thread_block()”** is a function defined in **threads/thread.c** file and puts the current thread to sleep. It will not be scheduled again until awoken by **“thread_unblock()”** function.
- **During timer interrupts, “thread_unblock()”** sleeping threads if their timer expired
- Disable interrupts to protect critical sections

A correct implementation would not make any of the current tests start failing, and an execution of `make check` should print the following result:

```
pass tests/threads/alarm-single
pass tests/threads/alarm-multiple
pass tests/threads/alarm-simultaneous
FAIL tests/threads/alarm-priority
pass tests/threads/alarm-zero
pass tests/threads/alarm-negative
FAIL tests/threads/priority-change
FAIL tests/threads/priority-donate-one
FAIL tests/threads/priority-donate-multiple
FAIL tests/threads/priority-donate-multiple2
FAIL tests/threads/priority-donate-nest
FAIL tests/threads/priority-donate-sema
FAIL tests/threads/priority-donate-lower
FAIL tests/threads/priority-fifo
FAIL tests/threads/priority-preempt
FAIL tests/threads/priority-sema
FAIL tests/threads/priority-condvar
FAIL tests/threads/priority-donate-chain
FAIL tests/threads/mlfqs-load-1
FAIL tests/threads/mlfqs-load-60
FAIL tests/threads/mlfqs-load-avg
FAIL tests/threads/mlfqs-recent-1
pass tests/threads/mlfqs-fair-2
pass tests/threads/mlfqs-fair-20
FAIL tests/threads/mlfqs-nice-2
FAIL tests/threads/mlfqs-nice-10
FAIL tests/threads/mlfqs-block
20 of 27 tests failed.
```
